

Amendments to the Claims:

Claims 1-4, 7 and 8 (Canceled)

5. (Currently Amended) A thin meshy porous body comprised of a thin plate member having a thickness of 10 to 50 μm and defining front and rear faces with embossing on each face, said embossing comprising concave and convex portions opposite to and adjacent to each other on said front and rear faces, wherein:

each of said convex portions has ~~an~~ a substantially rectangularly shaped opening formed at its tip in at least one face, ~~wherein and~~

each convex portion has a petaloid shape in which multiple petaloid shaped pieces are developed, and a V-shaped valley is formed between the adjacent petaloid shaped pieces.

6. (Currently Amended) The thin meshy porous body as defined in claim 5, ~~wherein the thickness of said plate member is 10 to 50 μm , and wherein:~~

said concave and convex portions have a quadrangular pyramidal shape, each defining an opening having substantially a square shape, with the longitudinal length of said openings being ~~360~~ 365 to 510 μm , the lateral length of said openings being 360 to 510 μm , and the opening ratio being 45 to 60%.
